

All 5's Doors, Frames, and Hardware (DFH) group helps ensure your job starts and finishes properly. From design and material selection to pricing, installation, and management, our DFH professionals are here to support you every step of the way.

Choosing the appropriate materials for doors, frames, and hardware is crucial for the structural integrity and aesthetic finish of a building, and includes considerations for fire safety, sound control, security, and energy efficiency. Our skilled carpenters work with the precision, seamless coordination, and professional installation essential for proper function while meeting safety and performance requirements.

Our Division 8 services include, but are not limited to:

- Conventional frames and doors
- Specialty frames and doors
- STC-rated, blast-resistant, and waterproof openings
- Traffic doors
- Radiation-shielding doors and frames
- Ballistic-rated door opening assemblies
- Stile and rail wood doors
- Oversized doors up to 8' wide and 20' tall
- Factory and on-site keying
- Patented and restricted keyways available
- Fiberglass reinforced doors
- High-security openings and hardware
- Auto operators and electrified hardware
- Stainless steel frames and doors
- Aluminum frames, side lights, and windows
- High-performance sliding door systems
- Computerized shop drawings
- Field measuring of existing openings
- Design-Assist capability
- Registered AHC on staff

In addition, we have in-house staff who are fluent in code compliance and factory-trained in many hardware components. They can assist with preparing hardware schedules based on the owner's design criteria and budget. Our staff works collaboratively with the design team to ensure all required parameters are captured to develop comprehensive specifications and schedules.
